## AGI Early Careers Network Masterclass in Data Visualisation

In partnership with British Cartographic Society (BCS), the AGI Early Careers Network group ran a lunchtime Masterclass in Geographic Data Visualisation on 14 July.

Paul Naylor, Vice-President of the BCS, talked about the different ways geography can be used to articulate a story from data, from topographic maps, story maps or thematic maps which bring in other data.

Using examples from current affairs, Paul talked about the methodologies, software and tools that can be used to build a narrative and create real impact. The Masterclass consisted of a lecture, followed by breakout groups to appraise examples of data visualisation, and there was time for Q&A from participants.
